## How Do I Start Using the Public Website?

### Question

**May I request material as a home gardener?**

### Answer

No.

Various websites and blogs may direct the general public to the NPGS as a source of free seeds and other plant material. However, such requests will be denied. The NPGS contains specialized collections designed to support research, plant breeding, and selected advanced educational projects. Plant material for home gardens is easily and affordably purchased from many seed companies and retail nurseries.

### Question

**Are there any videos that explain how to use the GRIN-Global Public Website?**

### Answer

Yes. More will be developed. In the meantime, see:

# Ordering Germplasm

## Question

### Can anyone order germplasm?

## Answer

The U.S. National Plant Germplasm System (NPGS) collects, conserves, documents, evaluates, enhances, and distributes plant genetic resources used by U.S. and world agriculture. The GRIN-Global database maintains electronic information on more than 570,000 unique plant accessions at twenty NPGS locations. Distribution of available germplasm and information is free to researchers and educators worldwide. In return, recipients are asked to provide information regarding the utility of the germplasm for crop improvement, direct use, and scientific research. This information helps curators understand germplasm users' needs and better target Plant Genetic Resource use.

There are possible alternative sources for fulfilling your needs for this or similar germplasm. One website, Plant Information Online, operated by the University of Minnesota (<http://plantinfo.umn.edu/default.asp>), enables searches for numerous diverse cultivars, including many of the most popular samples in the NPGS. "Clicking" on the name of a cultivar downloads a list of commercial nurseries that can provide plants.

## Question

### How can someone ordering germplasm on the Public Website make a request based on a list of accessions?

## Answer

Users who have a list of accessions can paste their list into the Search box. Select **Search Accessions** | **Search Options**; check the **Allow Multiple Lines** box; paste the list into the search box.

The screenshot shows the NPGS Search Accessions page. At the top, there is a navigation bar with links: Search Accessions, Search Taxonomy, View Cart, Reports, My Account, and Help. Below this is a breadcrumb trail: Home Page > Search Accessions > General. The main section is titled 'Query Criteria:' and shows a 'Search String' containing a list of accession numbers: PI 553178 PI 553181 PI 553182 PI 553466 PI 553637 PI 553889 PI 21933 PI 608835 PI 618296. Below the search string is a 'Search For:' text box containing the same list of accession numbers. To the right of the text box is a green 'Search' button. Below the text box are two tabs: 'Search Options' (selected) and 'Advanced Search'. At the bottom, there is a section for search options. It includes a dropdown menu for 'Return up to' set to '500' and the text 'accessions'. Below this are two checkboxes: 'Match All Terms' (checked) and 'Allow Multiple Lines' (checked, highlighted with a red box).

## Question

**When do accessions with expiring PVPs become available?**

## Answer

The Plant Variety Protection status on the GRIN-Global (GG) database is dependent on the Plant Variety Protection Office (PVPO) data being updated. When the release information is updated in the PVPO site, this data is used to update the status of the GG records and only then is the germplasm available for ordering.

PVPO data is available on the website: <https://www.ams.usda.gov/services/plant-variety-protection/application-status>. At the bottom of the page is a contact [PVPOmail@ams.usda.gov](mailto:PVPOmail@ams.usda.gov) for questions on the page.

The GRIN-Global curators monitor the PVPO site and update the GG website as soon as possible. Any orders for germplasm whose PVP is expiring cannot be processed until the status from the PVPO officially indicates the release. Unfortunately, at the present time, in GRIN-Global, we do not have an automatic way to trigger orders in advance for germplasm whose PVP is about to expire.

Within GRIN-Global you can determine PVP status of germplasm using a variety of approaches. See <https://goo.gl/GacRWk> for details. We appreciate your patience.

## Question

### Determine the Status of My Order?

## Answer

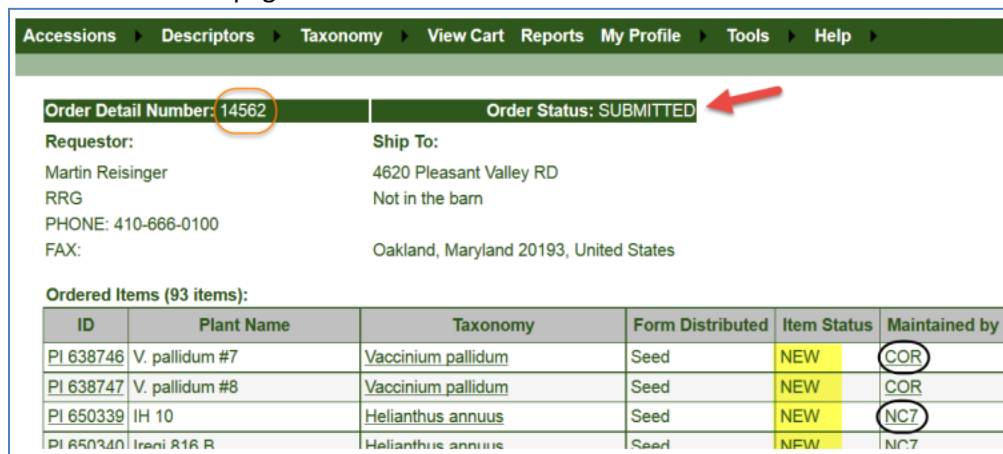

In order to determine an order's status, you must be logged in.

Select **My Order History**; then click on the view detail link for the respective order:

The order's details page contains much information.

The order's number is listed as well as the status. In this example, the order number is 14562 and the order has been received but not processed yet ("Submitted").

Only four items are shown here, but all of the item statuses for this order was listed as "New." In this case, some of the items will be shipped from the site "COR" and others from the site "NC7." Since these site codes are links, you can click on them to obtain the site's details, including site contact information.

## Error Messages

### Question

The following error is displayed when the user requests “List available accessions from a site.”

“We’re sorry your last request caused an error in the server. Error details have been logged on the server ...”

### Answer

The GG administrator needs to check the **web.config** file in **inetpub\wwroot\gringlobal**. The web reports use one separate connection to query the database.

When checking your web.config file, ensure the following “DataManagerWeb” line is uncommented:

```
<add providerName="sqlserver" name="DataManagerWeb" .....
```

similar to the “DataManager” connection line and the connection parameter works for your database.

# Unexpected Results

## Question

**How can it be that when I search for PI 269834, I get PI 234432? (w/ video)**

Why does the Search return an accession whose number doesn't match the one I entered?

Example:

The screenshot shows the NPGS Home Page search interface. The search criteria are: Search String: PI 269834, Accessions are: Include unavailable. The search results show a single result for PI 234432, which is highlighted in yellow. The result table has columns: Plant Name, Taxonomy, Origin, Material, and Maintained By. The result for PI 234432 is: CCC 388, Solanum tuberosum subsp. andigenum, Colombia, Antioquia, Seed, NR6.

Plant Name	Taxonomy	Origin	Material	Maintained By
PI 234432	CCC 388	Solanum tuberosum subsp. andigenum	Colombia, Antioquia	Seed

## Answer

The search in the Public Website includes searching the 3 inventory fields used in the Inventory Identifier (Inventory –prefix –number, and –suffix). The PW user will sometimes receive a confusing result, for example, when he omits using a prefix such as PI. The accession number that is returned will not match the number inputted. (Example: Input **377786** in the search box on the GG Public Website main page - or - watch the video at
