K Kittell	Mark Millard	Marty Reisinger	Benjamin Haag	Cullen McGovern

*Change control board

Visitors: Tiffany Fields, Kun Fang Chiang, Cassa Munroe

Roll Call

Agenda:

Approve minutes from last meeting. Motion to approve_____; Seconded_____ Ask for virtual

approval after the meeting.

Old Business:

1. Report from DEV: Gary: Vacant position – two were interviewed so far – went well. GK made a selection and now it's in HR's hands. – This will be a remote position. Kurt Endress – has returned as a New Solutions contractor and is going through onboarding procedures and hopefully will be back working soon.
SMTA transition has gone smoothly – still working through some documentation and procedures. China is now a special procedure country and all orders from China have to be reviewed at a higher level before they can be released to the sites. Also, a printed SMTA copy is being reviewed by Gayle Volk to be included in outgoing orders. A Q and A for this will be forthcoming. New Release in March pending security scanning.
Marty = Reminder that while an order is working its way through the NRR tool or Country verification, you can't see it in the OW.

- Server (DBMU) – Taxonomy name will show up on MAP it button.
- CT (P. Cyr) – No update. Working on a GEM app – analyzing their database for pedigree. Also working on Imaging issues (hopefully in the next two weeks). Labels have been on hold but needs to work with Ames people to make sure the labels are printing properly and then will release for testing.

2. Subcommittee reports:
   - Multiple inventories, seasonally available and multiple form (J. Smith) – Need testers to move the process along – expand the tester group. – Nothing to report. Marty will be working on documentation and testing.
   - Genetic Observations (C. McGovern) – Nothing – working through some bugs with BH.

   - NRR (GK, MR, AN and BH) – compiling of stats – fewer denials last year - Fewer standard home gardeners – more like hobby breeders. Intended use information is becoming more sophisticated.
   - GIS (L. Taylor) – Nothing to report – have been very busy and not sure when she will get back to the work.
   - Barcoding/reports/labels sub-committee (PC) – See above.
   - APR (L. Burke) – See power point. KK review existing apps for Brock and Rachell – didn't think it would work. Recommends starting from scratch. Call it feedback not a survey. Put this on hold. MR is suggesting adding help icons to assist requestors with querying instead. MM asked if the help emails are captured for future analysis.
   - Reports (GV)

3. Review inventory action code updates (JB and AN) – Stored by curatorial staff – can we shorten it to Stored? LB will enter ticket.

New Business:
1. Germplasm form - Update description for fungus – CCB approved
2. GG AdCom annual report – LB will work on it and send something out for feedback for the March meeting.
3. Search Tool Enhancements: <mark>See MR Search Tool Document</mark>.
   Button – Display all columns.
   Mimic CT function where you can customize columns.
   Tab manager.
   Column Chooser – PC – would have to pull the CT column chooser function out and then place that in the ST. Remove the Common.DLL from the CT and move it to the ST. Question to the AdCom – is this important enough to move forward - #2667 (Column Chooser needed for the Search Tool) – GrinGlobal (ars-grin.gov) – Yes, the committee would like this to be moved up in priority.

Future meeting dates:

February 27th
